

This landing page copy for **Bad Workflows** is designed to shift a prospect's mindset from manual, high-friction outbound to a systems-led, AI-native operation. It uses the core principles of infrastructure-first growth and the **Proximity Method** to build trust through technical transparency.

Stop Fighting Bad Workflows. Own a Mathematical Revenue engine.

Most outbound efforts fail because they are built on **Bad Workflows**: manual list scraping, fragile infrastructure, and "hope-based" copywriting. In 2026, volume is no longer a luxury—it is a requirement to remove variance from your sales pipeline.

Bad Workflows builds and maintains the end-to-end cold email systems that transform outreach from a gamble into a mathematical certainty.

The Three Pillars of Your Outbound System

1. The Sending Engine (Technical Infrastructure)

We don't send from "disposable" or shared accounts. We build on **Legitimate Microsoft 365 Infrastructure**.

- **The 99-Mailbox Protocol:** We configure every domain to support high-density sending (99 mailboxes per domain), allowing for nearly 500 emails per day per domain without triggering bulk-send flags.
- **Ecosystem Trust:** By sending from M365, your mail arrives from within the same ecosystem your B2B prospects use (Outlook-to-Outlook), giving you a structural deliverability advantage.
- **The Technical Floor:** We handle the "secret codes" of deliverability. **SPF, DKIM, and DMARC** are configured with a strict **p=reject** policy from day one. Every domain is aged for 30–90 days to accumulate neutral reputation before its first send.

2. The AI Operator (Research & Personalization)

Real personalization requires research, and manual research doesn't scale. Our system uses **Claude Code** to act as a persistent operator inside your data.

- **Deep Website Intelligence:** We use Cloudflare Browser Rendering to "read" every prospect's website, distilling their specific service lines and market focus into clean data.
- **The Signal-to-Copy Chain:** We turn scraped context into a "Business Signal". Our AI then fills "intentional holes" in your copy with row-level variables, ensuring every email reads like it was written by a human who did their homework.
- **Institutional Memory:** Every reply and campaign win is captured in a local **Obsidian vault**, building a compounding "sales brain" that ensures your month 12 campaigns are materially better than month 1.

3. The Deliverability Guard (Safety & Variation)

To stay in the primary inbox, you must avoid looking like a robot.

- **AI Spam Guard:** Every word we generate passes through a seven-layer filter that blocks 350+ "banned words" (like *access*, *deal*, or *call*) that statistically trigger junk filters.
- **2-Phase Spintax Audit:** We use a holistic variation system to generate thousands of unique combinations of your email. No two prospects receive an identical "fingerprint," making your volume invisible to filters.
- **Middle-Right Proximity:** We strip out "setup language" (like *we can help*) and position your offer as close to the outcome—meetings and deal flow—as possible.

The 90-Day Build Sequence

We don't "turn on" campaigns overnight. We follow a disciplined operational rhythm to protect your reputation.

1. **Days 1–30 (Aging):** Your domains sit "parked" to accumulate reputation with Microsoft and Google.
2. **Days 31–45 (Warmup):** We run a 14-day minimum warmup cycle, gradually ramping from 1 to 10 emails per day.

3. **Day 46 (The Signal Pull):** We identify "Public Signals" (funding, hiring, or permits) to build your target list.
 4. **Day 47+ (The Launch):** We start with a **3,000-contact testing floor** to find resonance before scaling to full volume.
-

Why "Can I Send It Over?"

We replace aggressive "Book a Meeting" CTAs with **Utility-First Outreach**. We build interactive HTML lead magnets—like **ROI Calculators** or **Risk Scorers**—that help your prospects interact with their own data.

Instead of asking for their time, we offer them a gift. This lowers friction, increases curiosity, and results in a **positive reply-to-meeting ratio** that outperforms traditional pitching.

Request Your System Blueprint

Stop wasting margin on **Bad Workflows**. Let us build the predictable revenue machine your business deserves.
